

Abstract

A two-part wobbler equipped with a wobbling plate and having in its front part a fixing loop for attachment of the line and a hook fixed to its rear part. The front and the rear part joined by a joint, which allows relative movement of these parts so as to give the wobbler movements resembling the swimming movements of small fish. The fixing loop is connected to a rapid fixing hook, to which a flap resembling a fish, a spinner, a butterfly or any similar additional lure can be fixed.
